ASSESSMENT TOOL 1 – Concept Mapping Questions

Course Code:	CSA0315	Course Title:	Data Structures
CO Assessed:	CO1	Assessment:	Assessment Tool 1 – Concept Mapping Questions
Weightage:	10% of CIA	Total Marks:	100
CO1 Statement:	Basics, Data, Data object, Data structure, Abstract Data Types (ADT), realization of ADT in 'C', Primitive and non-primitive data structure, Linear and non-linear data structure Arrays & Recursion, Performance analysis and Measurement: Time and space analysis of algorithms, Average, best and worst-case analysis.		
Student Name:	Peram.Mahitha	Reg. No.:	192524136
Section / Batch:	2025	Date:	14-07-2026

Code of Conduct

I Peram.Mahitha(192524136) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____ P.Mahitha _____

Instructions

- This test contains 3 Concept mapping questions. Total: 100 Marks.
- When a student answer using a concept map, in evaluation the answer should contain following four requirements: Understanding of concepts, Connections between ideas, Logical structure, Clarity of representation.
- No negative marking. Unanswered questions carry zero marks.
- No DTP printouts or electronic devices permitted. They should provide written materials.

Section / Topic	Focus	Q Nos	Marks
Basics, Data, Data object, Data structure, Abstract Data Types (ADT), realization of ADT in 'C'	Concept mapping of Basics in Data Structure	1	30
Performance analysis and Measurement: Time and space analysis of algorithms, Average, best and worst-case analysis.	Fibonacci series	2	40
Primitive and non-primitive data structure, Linear and non-linear data structure Arrays	Concept mapping on classifications of data structures.	3	40
GRAND TOTAL:			100 Marks

Annexure A – Application Based Assessment

- 1) Write a c program and draw the flow chart as concept map for finding the count of odd and even numbers in an array of n numbers.
- 2) Write a concept map based flow chart and also write the program to generate the Fibonacci series and sum of the series up to n numbers.
- 3) A smart city traffic management system handles data related to vehicle movement, road networks, and signal control. Construct a concept map connecting Primitive Data Structures → Non-Primitive Data Structures → Linear → Non-Linear Structures. Include examples such as arrays, linked lists, trees, and graphs, and illustrate their applications in traffic management. Explain the relationships between these structures and justify their classification based on functionality and efficiency.

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

ASSIGNMENT-1

(CO1-AT1)

Name :- Peram. Mahitha

Reg No :- 192524136

Course Code :- CSA0315

Course Name :- Data structures

Date :- 14-07-2026.

① Write a C program to count number of odd and even elements in array of n elements.

Ans

Aim:-

To write a C program to count the number of odd and even elements (n).

Algorithm:-

- * Start
- * Read the number of elements (n)
- * Read the array element
- * Initialize $odd = 0$ and $even = 0$
- * Check each element.
- * Display the number of odd and even element
- * Stop.

Program:-

```
#include <stdio.h>
```

```
int main()
```

```
{
```

```
    int n, i, a[100];
```

```
    int odd = 0, even = 0;
```

```

printf ("Enter number of elements: ");
scanf ("%d", &n);
printf ("Enter array elements: \n");
for (i = 0; i < n; i++) {
    scanf ("%d", &a[i]);
}
for (i = 0; i < n; i++) {
    if (a[i] % 2 == 0)
        even++;
    else
        odd++;
}
printf ("Even elements = %d \n", even);
printf ("Odd elements = %d \n", odd);
return 0;
}

```

Output:-

Enter no of elements = 5

Enter no of array elements = 10 15 8 7 20

Even element = 3

odd element = 2

to a C program to print fibonacci series and sum of fibonacci series.

Ans:

To write a C program to print the fibonacci series and calculate its sum.

Algorithm:-

- * start
- * Read the number of term
- * Initialize $a=0, b=1, sum=0$
- * Print fibonacci term
- * Add each term to sum
- * Display the total sum
- * Stop.

Program:-

```
#include <stdio.h>
int main (c)
{
    int n, i;
    int a=0, b=1, c;
    int sum=0;
    printf ("Enter number of terms: ");
    scanf ("%d", &n);
    printf ("Fibonacci series : \n");
    for (i=1; i<=n; i++) {
```

difficult

```

print("%d\n");
sum = sum + a;
c = a + b;
a = b;
b = c;
}
print("sum = %d", sum);
return 0;
}

```

output :-

Enter no. of element : 7

Fibonacci series : 0 1 1 2 3 5 8

sum = 20

③ Write the concept map data structure and classification of data structure.

Definition :-

A data structure is a way of organization. Storing and managing data so that it can be accessed and modified efficiently.

Classification of data structure:-

Array:-

Collection of location in memory under the same name and data type is called array,

Ex:-

→ Array in Data structure.

Stack:

Last in first manner (The boundary of data structure is fixed)

Non-stack:

No boundary & memory location are not fixed

stack data structure (LIFO)

Queue

Connected one data to another data with the help of address. First in first order or manner.

Queue Data structure (FIFO)

Linked List: first in & connected one data to another data with the help of address.

Head Singled Linked List

Non-Linear Data Structure:-

⇒ It is non sequential order.

1. Tree

2. Graph

Tree

Graph

$G = \{V, E\}$

$V = \{A, B, C, D\}$

$E = \{AB, AC, BD, CD, AD\}$

Advantages:-

- ⇒ Efficient storage of data.
- ⇒ Faster searching and sorting
- ⇒ Better memory utilization.
- ⇒ Easy data management.
- ⇒ Improves program performance.

Application:-

- ⇒ Database Management System [DBMS]
- ⇒ Operating Systems.
- ⇒ Computer Network
- ⇒ Artificial Intelligence
- ⇒ Software Development.
